

## Linear Regression Implementation

- Use **Linear Regression** on any suitable dataset
- Perform **data preprocessing** (cleaning, normalization, feature selection)
- **Download a dataset** from Kaggle or any open source
- **Upload the dataset to Google Drive**
- **Implement and train** the model in **Google Colab**
- **Share the Colab link** (ensure access permission is set to “Anyone with the link”)
- Include **screenshots** of:
  - Loss curve
  - Accuracy or error metrics (**MAE**, **MSE**, **R<sup>2</sup>**, etc)
  - Sample predictions/output
