Course: Accounting and Information Systems, Class test-2, Course Code: AIS:3201, Marks 10

1. Define break-even point and contribution margin with example. 3
2. ABC company manufactures and sells a specialized cordless telephone for high electromagnetic radiation environment. the company's contribution format income statement for the most recent year is given below: 7

	Total (TK)	Per unit(TK)
Sales(20,000 units)	15,00,000	75
Variable expenses	12,00,000	60
Contribution margin	3,00,000	15
Fixed expenses	2,50,000	
Net operating income	50,000	

Management is anxious to increase the company's profit and has asked for an analysis of a number of items.

Requirements:

- i) Compute the company's CM ratio and variable ratio.
- ii) Compute the company's break-even point in both units and sales in taka using equation method.
- iii) How many units to be sold to earn profit TK 90,000? Calculate based on contribution method.
- iv) Compute the company's margin of safety in both taka and percentage form.
- v)) Assume that through a more intense effort by the sales staff, the company's sales increase by 8% next year. By what percentage would you expect net operating income to increase? Use the degree of operating leverage to obtain your answer.
- vii) Verify your answer to (b) by preparing a new contribution format income statement showing a 8% increase in sales.
